Summary

As a specialized English ↔ Arabic technical translator, I work with organizations that operate at the intersection of technology and sustainability—transforming highly technical content into clear, structured, and accessible documentation for diverse audiences.

I focus on high-value content, including:

- Technical documentation (user guides, developer docs, software manuals)
- White papers and thought leadership content
- ESG reports and sustainability content
- Product and platform documentation

I combine subject-matter understanding in energy systems, sustainability, and software with strong translation/localization discipline to deliver content that is not only accurate—but useful, usable, and aligned with business goals.

Professional Skills

- Deep knowledge of many families of software solutions
- Deep knowledge of Power/Energy technologies
- Documentation and Technical Writing
- English ↔ Arabic Technical Translation
- AI, Research and Knowledge Management
- Programming: C# (.Net), Python
- Development of Windows Desktop and Web Applications
- REST APIs and SOAP Web Services (Authoring and Consuming)
- Hardware Integration
- SQL Server and other Databases

Soft Skills

- Advanced Communication
- Problem-Solving & Analytical Thinking
- Adaptability
- Stakeholder Management
- Time Management & Discipline
- Teaching & Mentoring
- Attention to Detail

Work Experience

SELF-EMPLOLYED | 2024 - PRESENT
Technical Translator and Localization Specialist

- Pursuing a lifelong passion for independent work in Energy/Technology content writing and localization

AMAN INFORMATION SYSTEMS | 2020 - 2024
Senior Development Engineer

- Analyzed, designed, developed, deployed, and supported sophisticated payment ATM-like self-service machines (kiosks) for a major telecom customer. C# .NET.
- Performed software integration with other systems using REST Web APIs and SOAP Web Services.
- Wrote code to perform hardware integration of the Kiosks with many device components including cash acceptors, cash dispensers, barcode readers, sim card dispensers, passport scanners, fingerprint scanners, led lights, sensors, and cameras.
- Developed REST Web APIs for use by mobile applications.
- Developed and enhanced web applications for monitoring and administering the Kiosks in full stack (Microsoft Stack), SQL Server, ASP.NET, HTML, CSS, JavaScript.
- Performed deep research of the technologies used by the company (example: Selected, understood and integrated with an AI Image Similarity Engine for one of the company projects)
- Mastered documentation and technical writing of the systems I worked on.
- Active usage of GitHub and Jira.

SIM-LAB SOFT | 2018 - 2019
Software Engineer

- Developed testing scripts (in Python) for performance benchmarking of the 3D modeling software product.
- Performed testing of the company APIs with Python.
- Made enhancements to the 3D modeling software in C++.

INVESTMENT WORLD FOR DEVELOPMENT AND TECHNOLOGY | 2015 - 2016
Technical Consultant

- Obtained the required certifications in Watson Content Analytics from IBM.
- Participated in implementing a major IBM Watson content analytics project for a large customer.
- Successfully solved complex problems in the implementation and ensured smooth delivery.

IMAGE TECHNOLOGIES | 2011 - 2013
Software Engineer

- Wrote SRS documents for many of the company's Document Management and Workflow Management implementations.
- Participated as a core team member of the company initiative to upgrade its CMM level.
- Performed software analysis and design of many of the company's flagship enterprise software products. Technologies included ASP.NET, Visual Basic .NET, and SQL Server.
- Performed advanced design and documentation tasks.

SELF-EMPLOLYED | 2006 – 2010

Graduate Student and Technical Trainer

- Graduate student at University of Jordan - Engineering / Energy Management
- Technical Trainer in Computer Software and Engineering subjects
- Researcher and published paper author

JORDAN DATA SYSTEM | 2003 - 2006

Technical Consultant

- Successfully performed many deployments of DocSafe (document management system), and Maximo (maintenance, repairs, and operations) for several customers including many banks and large corporations. Work included extensive tasks as a DBA on SQL Server and Oracle, and Windows Server administration.
- Successfully performed customizations, training, and technical support of these deployments.
- Prepared many successful tender responses.

ALBAWARDI RESOLUTIONS | 2002 - 2003

Software Engineer

- Programmed middle tier COM components in Visual Basic
- Developed Database tier algorithms
- Mastered front end HTML and CSS development
- Collaborated with a team to develop HR and Car Rental web applications, and reusable web components.
- Represented Intel in GITEX 2002 and demonstrated their VTune performance analyzer.

ONEWORLD SOFTWARE SOLUTIONS | 2000 - 2001

Software Engineer

- Team Leader of a team of five developers. provided programming guidance and support for the team.
- Design and Architecture of a Rational Rose Add-On that converts a graphical model to a detailed SRS Word document.

SYSTEMS AND ELECTRONIC DEVELOPMENT (SEDCO) | 1998 - 2000

Development Engineer

- Developed printer drivers for Windows; extensive work on text and graphics rendering using C++.
- Migrated SEDCOTERM (one million lines of C/C++ code terminal emulator desktop application) from win16 to win32.
- Maintained and enhanced SEDCOTERM with numerous new features and functions.
- Lectured many courses for company staff on C++.

Education

MASTER OF SCIENCE | 2009 | UNIVERSITY OF JORDAN

- Engineering / Energy Management
- Average: 4.0 / 4.0
- Thesis: Designed, developed, and applied computer simulation in the evaluation of renewable energy systems (Visual Basic .Net)

BACHELOR OF SCIENCE | 1998 | UNIVERISTY OF JORDAN

- Electrical Engineering
- Average: 3.53 / 4.0
- Training: Germany. Development of control systems
- Graduation Project: Software development of a complex simulation system in C++

Languages

- Arabic: Excellent, Native
- English: Excellent, Professional
